

TASK 1

HOUSE PRICE PREDICTOR

EDA , Summary and Key Findings

Submitted By: Isha Rathore
Email: isharathorer2004@gmail.com

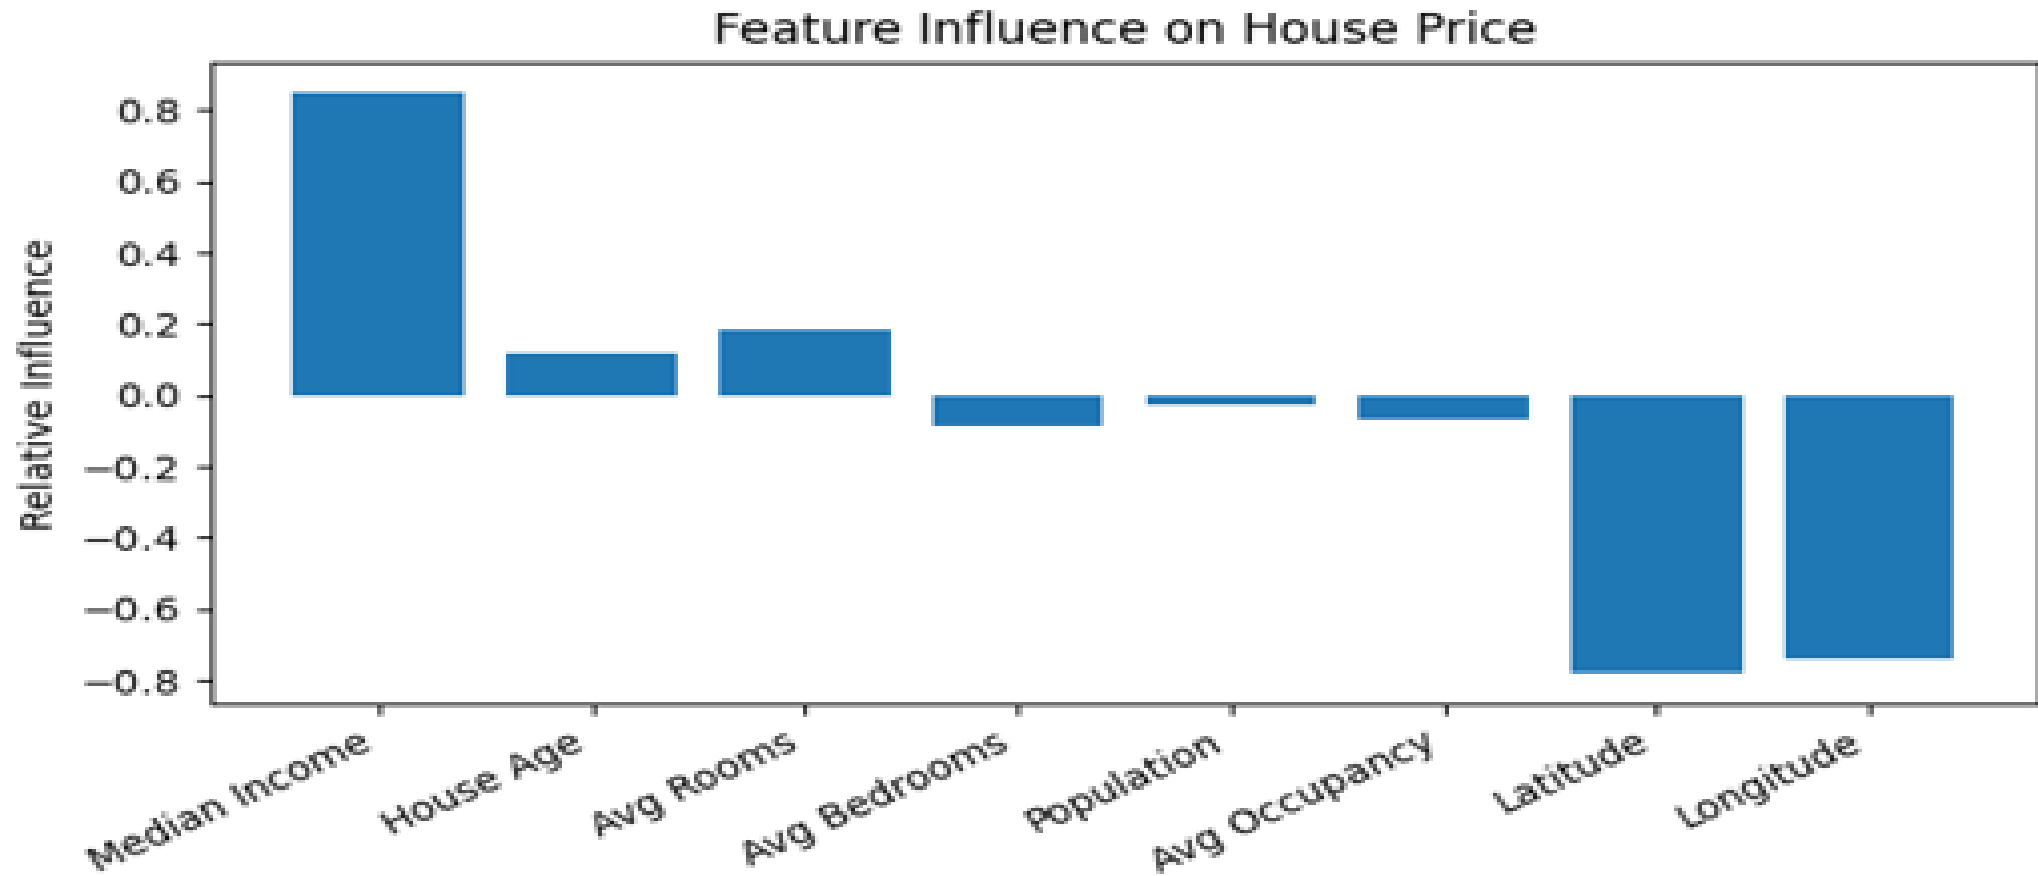

EDA

- No missing values found
- Median income strongly affects prices
- Location influences house value
- Price distribution shows expensive regions
- Correlation heatmap used for analysis

MODEL PERFORMANCE

- Model Used: Linear Regression
- MAE: 0.5332
- RMSE: 0.7456
- R^2 Score: 0.5758
- Model provides a reasonable baseline for prediction.

FEATURE INFLUENCE

FUTURE IMPROVEMENTS

- Try Random Forest / XGBoost
- Add feature engineering
- Use hyperparameter tuning
- Improve validation strategy
- Handle outliers and scaling

Thank you!

The background features a large, solid olive-green circle on the right side. To its left, a large white circle overlaps it. The top and bottom edges of the image are decorated with a mustard-yellow band. Within this band, there are several thin, vertical white lines on the right side, and a few thin, horizontal white lines near the center where the circles overlap.
